

Dear Valued Customer

The HemoTemp II is undergoing cosmetic and non-functional changes. Product characteristics related to storage, activation, interpretation, intended use, and the materials used in construction of the HemoTemp II, remain unaltered.

Summary of changes as follows:

- Primary package size reduction to 2.3" x 3.2" x 1.25"
- Label shape change to rectangular with rounded corners
- Label size change to 2" x 1"
- Label retrieval change to individual pieces dispensed at bottom of box with kiss cut backing liner
- Font change
- Color blue shade change

There is no change to the color, interpretation, or performance of the chemical in the indicating windows, the label adhesive, or anything related to activation. The existing Biosynergy activator is still the proper activation method for the HemoTemp II indicator.

Affected SKU: 3000

Changeover is expected to be complete by the end of October. Shipping new look product will begin after existing HemoTemp II stock is exhausted. New look product may be shipped any time after October 31st, 2023. Thank you for your continued support and commitment to using the HemoTemp II indicator as a part of your overall blood temperature monitoring program. For any questions, please contact your local sales representative, or send an email to Mason McWilliams at mmcwilliams@spotsee.io.
