SpotSee®

ShockWatch® Label QR

ShockWatch® Label QR is a single-use, battery free, connected impact sensor enabled by smart phones to seamlessly determine if a condition (i.e. impact) event has occurred and reports this condition along with time, date, location, and serial number to the SpotSee cloud. SpotSee's cloud platform displays individual sensor information and high-level condition insights to aid shipping and quality improvements. ShockWatch Label QR goes from clear to red an impact over the selected threshold has been experienced.

Improve Decision Making

Remotely identify, analyze, and improve problem areas or lanes in the supply chain.

Visualize Supply Chain Performance

Cloud-based impact event monitoring with real time insights of sensitive asset condition down to the point-of-sale. When your customer knows, so do you.

Compliance & Data Security

24/7 web-based cloud access to shipment condition, built to comply with 21CFR Part 11 record keeping and user access requirements.

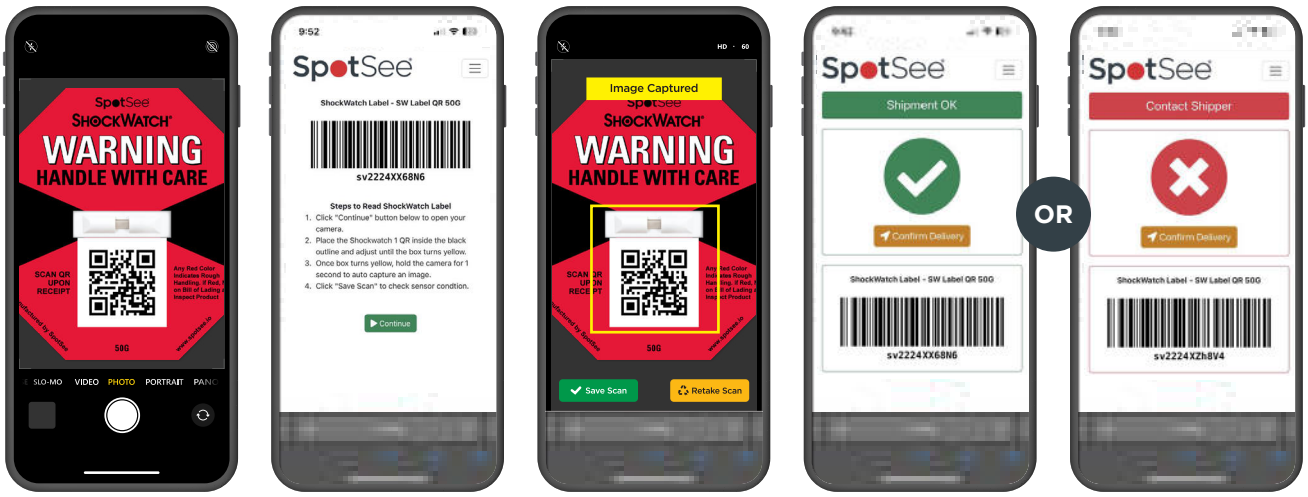
Adoption Made Easy

No app required. Designed for use by all supply chain personnel and more.

How It Works:

- Apply to product
- ShockWatch Label QR senses impact levels that your shipment experienced
- Recipient scans QR code with smart phone to access condition information
- Real time scan data is sent to the cloud for shipper review

Initial QR Scan | **Serial Number & Scan Instructions** | **Vision System Check** | **Condition Information**

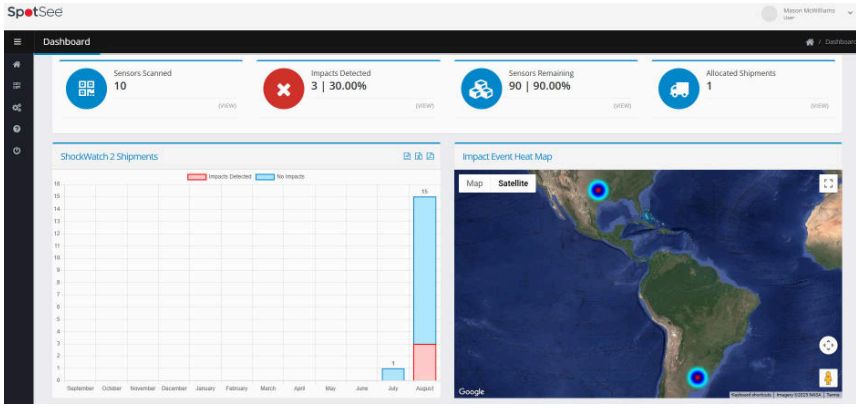


ShockWatch® Label QR

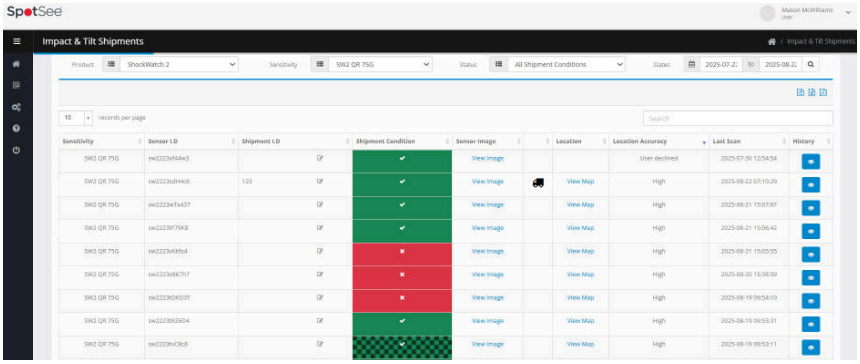
SpotSee Cloud

A dedicated cloud platform designed for compatibility with low-cost, single-use impact and tilt sensors utilized in shipping applications. Track the end-state of critical and high-volume assets at each step in the supply chain.

Dashboard:



Individual Sensor View:



A to B Visibility

The data you need, when you need it. SpotSee Cloud and connected single-use impact and tilt sensors provide shipment condition status from the end user. Ascertain the time, date, location, and condition of every sensor you deploy when scanned by a smart phone.

Simplify Data Collection

Gathering information for better decision making has never been easier. ShockWatch Label QR addresses blind spots in the supply chain and provides visibility where there previously was none.

Package Level Monitoring

Criticality doesn't only apply to bulk shipments. ShockWatch Label QR can be used at the package or item level since it is a single use, low-cost sensor that doesn't require a return program and can remain on the item down to the point-of-sale for the ultimate peace of mind.
